

## Carbon neutrality accelerated to 2023 and absolute emissions reduced by over 50 percent

### Highlights

- Carbon neutral across operations by 2023 - Scope 1, 2 and Scope 3 supply chain emissions<sup>1</sup>
- Absolute operational emissions reduced by over 50 percent by 2023, significantly faster than required by the Paris Agreement and in line with a 1.5°C maximum temperature increase
- Company emissions intensity will be approximately 1 kg CO<sub>2</sub> per boe<sup>2</sup> by 2023, one of the lowest in the world
- Residual emissions neutralised using high quality, certified natural carbon capture projects, secured at competitive pricing
- Further actions planned to continue reducing residual operational and supply chain emissions

Lundin Energy AB (Lundin Energy or the Company) has committed MUS\$ 800 to reach carbon neutrality, 70 percent of which has already been spent on electrification of the Johan Sverdrup and Edvard Grieg platforms and three renewable energy projects. As a result of the electrification of our main producing assets by the end of 2022, the Company's carbon intensity will be at an industry leading low level of approximately 1 kg CO<sub>2</sub> per boe, over 15 times better than the industry average.

Through the sourcing of high quality, proprietary natural carbon capture projects and carbon credit offtake agreements all future residual emissions will be neutralised. Independent third party due diligence and certification on all of these projects has been obtained, to ensure quality and credibility. Alongside significant reductions in Scope 1 and 2 emissions, the Company has also taken further steps to actively reduce the Scope 3 emissions for which it has influence or control over, such as through a hybrid support vessel fleet and the sourcing of carbon neutral materials.

### Nick Walker, President and CEO of Lundin Energy, commented:

“Acceleration of carbon neutrality by two years to 2023 is a key differentiator for our business and one which is based on an absolute operational emissions drop of over 50 percent compared to 2020 levels, in a time when our production is projected to have grown by 40 percent. The defining factor has been the full electrification of our main producing assets by the end of 2022, which when coupled with our focus on reducing operational emissions across other areas of the business, has created a unique position from which I believe significant value will be created. It will further distinguish Lundin Energy as an industry leader and provide tangible examples of how oil and gas production can meet the needs of the energy transition, whilst also decarbonising more rapidly than the Paris agreement requires.”

*Lundin Energy is an experienced Nordic oil and gas company that explores for, develops and produces resources economically, efficiently and responsibly. We focus on value creation for our shareholders and wider stakeholders through three strategic pillars: Resilience, Sustainability and Growth. Our high quality, low cost assets mean we are resilient to oil price volatility, and our organic growth strategy, combined with our sustainable approach and commitment to decarbonisation, firmly establishes our leadership role in a lower carbon energy future. - 1) Scope 3 supply chain emissions include supply vessels, logistics and travel.
- 2) Across Scope 1 and 2 emissions

**Forward-looking statements**

Certain statements made and information contained herein constitute “forward-looking information” (within the meaning of applicable securities legislation). Such statements and information (together, “forward-looking statements”) relate to future events, including Lundin Energy’s future performance, business prospects or opportunities. Forward-looking statements include, but are not limited to, statements with respect to estimates of reserves and/or resources, future production levels, future capital expenditures and their allocation to exploration and development activities, future drilling and other exploration and development activities. Ultimate recovery of reserves or resources are based on forecasts of future results, estimates of amounts not yet determinable and assumptions of management.

All statements other than statements of historical fact may be forward-looking statements. Statements concerning proven and probable reserves and resource estimates may also be deemed to constitute forward-looking statements and reflect conclusions that are based on certain assumptions that the reserves and resources can be economically exploited. Any statements that express or involve discussions with respect to predictions, expectations, beliefs, plans, projections, objectives, assumptions or future events or performance (often, but not always, using words or phrases such as “seek”, “anticipate”, “plan”, “continue”, “estimate”, “expect”, “may”, “will”, “project”, “predict”, “potential”, “targeting”, “intend”, “could”, “might”, “should”, “believe” and similar expressions) are not statements of historical fact and may be “forward-looking statements”. Forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in such forward-looking statements. No assurance can be given that these expectations and assumptions will prove to be correct and such forward-looking statements should not be relied upon. These statements speak only as on the date of the information and Lundin Energy does not intend, and does not assume any obligation, to update these forward-looking statements, except as required by applicable laws. These forward-looking statements involve risks and uncertainties relating to, among other things, operational risks (including exploration and development risks), production costs, availability of drilling equipment, reliance on key personnel, reserve estimates, health, safety and environmental issues, legal risks and regulatory changes, competition, geopolitical risk, and financial risks. These risks and uncertainties are described in more detail under the heading “Risk management” and elsewhere in Lundin Energy’s Annual Report. Readers are cautioned that the foregoing list of risk factors should not be construed as exhaustive. Actual results may differ materially from those expressed or implied by such forward-looking statements. Forward-looking statements are expressly qualified by this cautionary statement.
